

## Project Demo Planning

|                      |                                       |
|----------------------|---------------------------------------|
| <b>Date</b>          | 15 March 2026                         |
| <b>Team ID</b>       |                                       |
| <b>Project Name</b>  | A Comprehensive Measure of Well-Being |
| <b>Maximum Marks</b> | 1 Mark                                |

### Project Demo Planning:

| S.No | Demo Section                     | Description                                                                                                                      | Duration (mins) | Responsible Member              |
|------|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------|-----------------|---------------------------------|
| 1    | Project Introduction             | Introduce the project, explain the objective, problem statement, and importance of predicting well-being using Machine Learning. | 2               | Tatikonda Dhanush               |
| 2    | Dataset & System Workflow        | Explain the dataset, preprocessing steps, feature selection, and overall project workflow.                                       | 3               | Narra Balaji                    |
| 3    | Machine Learning Model           | Demonstrate the Linear Regression model, model training, prediction process, and evaluation results.                             | 3               | Naidu Eswar                     |
| 4    | Live Web Application Demo        | Demonstrate user login, health & lifestyle data entry, prediction generation, graphs, dashboard, and recommendations.            | 5               | Sankarasetty Venkata Naga Akash |
| 5    | Technical Implementation         | Explain the project architecture, Flask backend, libraries used, and technology stack.                                           | 2               | Muvva Naga Sai                  |
| 6    | Conclusion & Future Enhancements | Summarize the project, discuss future improvements, answer questions, and thank the evaluators.                                  | 2               | Tatikonda Dhanush               |

### Demo Flow Summary:

| Step | Activity                         | Notes                                                                                                                                                                                                  |
|------|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | Introduction & Problem Statement | Explain why measuring overall well-being is important, the limitations of existing solutions, and the objective of the project.                                                                        |
| 2    | Solution Overview                | Present the project architecture, technology stack (Python, Flask, Scikit-learn, HTML, CSS, JavaScript), dataset, preprocessing steps, and Linear Regression model.                                    |
| 3    | Live Feature Demonstration       | Demonstrate the complete workflow: user login → health & lifestyle data entry → prediction generation → dashboard → graphs → personalized recommendations.                                             |
| 4    | Q&A Session                      | Answer evaluator questions, explain project modules, discuss challenges faced, and describe possible future enhancements such as advanced ML models, cloud deployment, and mobile application support. |
